first thing. renguard is great, thank you for that. now as far as i know, there's only one core patch. core patch two has yet to be released? another thing whenever i quit out of renegade after playing a server my computer doesn't quit unless i force quit with control alt delete, then i go through the error report thing, no big deal but just a little annoyed. i play renegade online through gamespy arcade. everytime a game ends i'm always quit out and sent back. i know this is most likely normal, but is there another way so that i can just go to that server automatically for map changes and such. i just hate having to reconnect after each time. im sorry if this message was unclear, i don't post on forums much. help would be appreciated.

imagica...i play renegade online through gamespy arcade. everytime a game ends i'm always quit out and sent back. i know this is most likely normal, but is there another way so that i can just go to that server automatically for map changes and such...So then the map is over your renegade quits out and you have to rejoin? or do you click quit then you see the scores? if so just don't click quit and the next map will start loading in 5-10 sec. Also some servers run extra maps which you may not have that would force your renegade to quit on you i think.

correct, as long as you have the next map in the server rotation...
