Your RenGuard client was unable to make an HTTP request and receive a trustworthy answer. Double check any firewalls you have running to make sure that they allow C:\Westwood\Renegade\game.exe the ability to make HTTP requests.

You'll need to consult your firewall's documentation, since each one is different.

take out renguard completely, uninstall it, take out game2.exe, bls.dll, renguard.dll and reinstall it, if you still have probs, msg me.
