I just reinstalled Renegade because it was loading really slow. I think because i didn't un-install renguard first now when i go to install it i accept everything and then when I chose the directory(which was the right one) i get a message that say "Renguard must be installed into your renegade directory" wtf, it is. Please help.

(notice in the picture i have the renegade directory)

Backup all your Rengade textures and maps, and reinstall Renegade, the patch, RG, CP1, etc., and see how that works.
