Whenever I try to run Renegade it begins to load up a map [this happens on any map] then it crashes and goes to the desktop  
This is only when I try to do Multiplayer Practice or on a normal map Im almost at the point of uninstalling renguard but I know I cant since it would just kick me from server Please help

It's not RenGuard. I don't know if this'll work, it did for someone else; lower your resolution. Your video card is probably screwed up.

You know Nowt.

Reguard doesn't effect the performance or gameplay of Renegade in anyway.  
Its no different than running MSN, Outlook, WMP, WinAMP in the background.

Renegade starting crashing for me at map load when I had tried editing the maps and then using the edited maps on servers that don't have the modifications. Make sure that if you've edited the maps, that the integrity is good and that if you try to connect to a server that does not have the changes, you use the original maps. Otherwise, Renegade will crash.

Make sure to check for error messages in RenGuard's dialog box. If there are any unusual ones you don't recognize paste them here.
