Well I don't know what they are for this game, and I was wondering if one of you would kindly tell me. I don't use IE at all, and in fact I uninstalled it from my computer a while ago, so I can't use that little Compatibility feature at the bottom of the site. Thanks in advance.

They're on the bottom of the game box...

PII 400 or higher
950mb or more space
at least 96mb ram
3d card is required
DirectX 8

And the usual microsoft compatible keyboard/mouse, > 4x pc cd-rom, and soundcard.

Renegade is a major system resources hog! The more you can put into your system, the better performance you'll get out of the game. My suggestion is lots of RAM and at the very least an AGP 4x 64MB video card.

Ha ha ha, I have a onboard Vid Card, 8MB of ram, it sucks. But I have 256 MB of ram for the motherboard, and 1.2 gig CPU, (its a celoron, it sucks too)

AnlesaukRenegade is a major system resources hog! The more you can put into your system, the better performance you'll get out of the game. My suggestion is lots of RAM and at the very least an AGP 4x 64MB video card.

Renegade is hardly a resource hog...

I have a crappy computer, 700mhz, 256mb ram, 8mb vid card, with Renegade on max and I get pretty good performance.

Subject: thanks

Ok thanks. It should run on my computer... Lol it has only like an 11 or 12 mb video card, but if you have 8 mb and it runs good then it should run okay on this computer. And I can play Tribes 2 on this computer, too.

I have a crappy computer, 700mhz, 256mb ram, 8mb vid card, with Renegade on max and I get pretty good performance.

That is EXACTLY what I have too, and it runs fine except with lag from 56k
