Found in a renlog.txt

[13:06:34] Refusing ""(xx.xxx.xx.xx:xxxxx); Reason: nick contains only spaces

I thought this had to do with our Silent Kane's no name exploit-fix. Does anyone know if this has to do with it and if it's always correct? Cause I seen IP's with that line of people that often play in our server.

TX

Why are you blanking out the ip?
These people who are often in your server are fags then
(the one(s) the ip belongs to that is, not the others),
because that log entry there SK's fix logs that whenever
a fag tries to join the server with a "no name" nickname
so they cant be kicked.

100% sure that it's always correct? Cause I'd say that the person who got refused that way really
isn't smart enough to do it (although I could be wrong)...

That's happened to me, and I've no idea how to do the exploit.

Yes, that message IS generated from SK's fix. I have never seen a false positive before.
