So, there was a name exploiter that thought he was cool by hacking my nickname in our server, he kickbanned a clan member and I was watching from IRC.

Then, I immediately kickbanned him, good, he's gone. I unbanned the clan member.

But now, I cannot get in because my nickname is banned too, i can still get in with different names.

how do I manually add his IP to a banlist, and which file in which folder in the FTP..

I tried all banlist files, i also tried creating wolbanlist.

I tried:

name:ip on all those files (my ip, to test it on myself first), but it didnt kick me when i joined game, while my ip was in banlist.txt wolbanlist.txt and banlist.txt in Brenbot folder.

So, how do I manually ban him?

IRC should show his true nickname. Unban yourself is all I can think of.

I can join with other nicknames, just, when I unban my nickname, his ip gets unbanned too and he will be able to join and hack again.

So, is there a way to manually ban IP's? I have access to the FTP.

You'll probably get more help outside the mod forum.

Found this in another topic, might help.

Creed3020 wrote on Thu, 16 June 2005 19:45The things mentioned in banlist.txt do not work. You best bet is to find out their nickname and ip and add it to your wolbanlist.txt file. If that files does not exist, create it with notepad. The format is like this:

nickname:ipaddress

example

lrcheatr:67.115.208.35

or

lrcheater:\*.\*.\*

or

\*:67.115.208.35

Good Luck!

1000th post

What you do is add this to your server.

<http://download.n00bstories.com/nicknameExploitFix.zip>

Nicknameexploit is installed.

Still able to hack people's names that are NOT ingame.

So if TD is ingame, and someone hacks TD with exploit, he gets caught.

If TD is NOT ingame, and someone hacks TD with exploit, he doesnt get caught, and they can use mod powers.

Yup, this hack is still available...

That wolbanlist didnt work, I tried that already, which folder do I put it in though?

Download this:

<http://www.multiplayermaps.net/downloads/ren/server/SQLiteManagerSetup.exe>

Follow the screenshot what to do:

<http://www.multiplayermaps.net/downloads/ren/server/changeba nname.gif>
