So this is like the same as the other topic below this.

My problem is the game wont start up.it shows me that little red window that says C&C renegade and then it closes.I reinstalled renegade like 4 times. i even deleted everything in the westwood folder and the folder itself.Still no luck...

WHat i dont understand is the game worked fine.im guessin git has to do with my FDS and/or night regulator.

These are 2 pics of what i have in my renegade folder.I belive when i instaiill renegade it doesnt instaiill correctly and leaves out some important files game.exe???

If you run a server on the same computer you play Renegade on, you MUST either have the server on a different windows login or you MUST run the game BEFORE you run the server.

Well... if you have RenGuard installed (or as shown in the images, you don't), you could always download <http://files.drkclan.com/index.php?action=file&id=2>

Heck, if you wanted to, you could even download that, install it to a different directory, then rename game2.exe to Game.exe and then overwrite your current game.exe file.

It's not missing, I can clearly see that, though it may be corrupt, that's why I suggested what I did above in this reply.

Interesting...

You did make sure to do this, yes? -> Install Renegade, Upgrade Renegade to 1.037, Install no-CD, Install anything else

Well yeah i did that one my third reinstall...
i installed renegade then i installed the patch then after that didnt work i even put in renguard...same problem.
Im lost why would it still be fucked up?some1 check your folder.i bet im missing something

im missing svrcfg_cnc.ini and maybe a always file and config and save folders and that on the renegade/data section.
im not sure about just in the renegade directory...
