I just installed renegade on my other computer and when I click on game.exe it gives me this:

The procedure entry point
?detect_Bandwidth@@YAKKKAAHAAKKPAUtBADtestSettingsStruct@@p
AD@Z could not be located in the dynamic link library BandTest.dll.

:\

I later installed renguard to see what would happen and it didn't help Any Ideas?

Get a working copy of BandTest.dll from a friend with Renny. Your copy appears to be corrupt.

I think its something to do with using the WOL components from older WOL games, such as RA2,
but getting a working bandtest.ddl should fix it.

But now when I get the bandtest.dll In my Renegade folder it says "Bhs.dll not found"
But its in my Renegade folder...
Then when I click "Ok" this shows up

The application failed to initialize properly (0xc0000142). Click on OK to terminate the application.

?!?

you need the latest scripts.dll, get them from http://members.lycos.co.uk/dp88/scripts.zip
