hello i signup because of something i found today.

a little bit about myself : name SoQShaun formerly shauninf, dont use cheats and never will im good enough as i have been playing since the very start. that been said over past few weeks now that i playing a lot more regualrly i been noticing ppl who are running renguard playing better than they ever have aka noobs suddenly becoming great. also ppl who never have been able to pwn me suddenyl can.

now before you say well ppl improve e.t.c. they dont by this much. so anyway i decided this afternoon to do a little research and testing off my own and discovreed a website that has a lot of haxes and more on, now ur renguard stopped bones.ini and bighead (btw i was testing this with a friend not in big game servers) however it didnt stop a aimbot that worked and also a stealth hax.

the aimbot is an external program needing a few .dlls (i think as im not great with the technical side)

the stealth hax is a .dds file

now i post here in the hope that u technical whizzes can do something to stop this, i posted on my clan forum about this and they all said just to post here and hopefully u can implement some changes.

i tested them so we can better moderator our server i.e. when we suspect someoen running renguard is actually cheating we can do other tests to verify there innocence.

now i wont post teh address of the website in public for obvious reasons as i dont really want a load of ppl going and getting there hands ont his rubbish and spoil the game before u can take action.

but if a programmer for blackhand studios can send me a privat message ill give u the website and u can see the rubbish there

Lots of people know that Rengaurd doesn't stop the stealth "hack" and aimbots, and I'm sure the programmer(s) of Rengaurd know that too.

1) RG in Pure mode WILL catch Stealth/C4/Beacon skin h4x...
2) Coming with 1.04...

From what I heard from people who tested the aimbot on these forums. The aimbot wasn't really really an improvement for them. So this one isn't really a big concern. seems Altough it is to bad, RG can't block it. The stealth skin sounds like a bigger problem.

It's good you posted.

Maybe could be a good idea to block all skins for stealth units in both pure and non-pure servers.

Eh? No, dont. I have a very neat SBH Skin, that came along with a pack. But PLEASE make the

---

Stealth Effect skins illegal, because i found one that made it invisible. Completely. An SBH walked right by me without be even knowing.

This aimbot I have tried myself, because of this topic. The shady character said hiding in a dark shadow.
The aimbot works real well. All you need is an internet connection that can keep your ping under 200, and a computer good enough to keep your FPS over 24. He said.
The aimbot can make people up to 5x better on any server with no vehicles. I think you should fix it, so people dont get screwed over on laddered servers. The shady character whispered as his voice grew thiner and his shadow like figure seemed to fade out.

EDIT: No I do not write books. So dont ask.

They dont exist.. they are only coloraimbots.
Coloraimbots dont work for renegade, to get a really good aimbot you need to inject into renegade.

The bots are based on a certain color like color
R: 255
G: 0
B: 0
So if they see color (R:255 G:0 B:0) they supposed to move the cursor over the color.
But most of these bots are built on other games like Counterstrike and Halflife.
If renguard wouldnt have all that shadows adn that kinda stuff the aimbots would have work perfectly ... but they dont

Umm yea, but there are some aimbots that if you look hard enough, dun need to be injected.
Althrough i agree on colorbot it wouldnt be that good on renegade.
