I'm going to upgrade the laptop I ordered, which should arrive either tomorrow or the day after.

I'd like to replace the Sempron 3000+ already in it with a Turion 64 MT-32 (25W, wewt), I have the money to do it, but after I'd also like to purchase a new battery, which would double the battery life the Turion would be giving me (12-Cell = 8 Hours on Turion + 4 hours of the other one).

The Sempron's either good for desktop computers or laptops, it's a Socket 754 and it isn't one that is left from the XP series (it's clock speed is 1.8GHz, unlike its fellow XP version of 2.0GHz... Cough, free 900MHz Socket A Duron Processor for whoever buys it, lol).

Anyone interested?

Oh, also I have a stick of 256MB SODIMM SDRAM DDR memory clocked at 333MHz for sale... If your laptop sucks (or simply if it has some space for an upgrade).

... Thank you for your time, eh.

Hey, how much are you exactly willing to offer? The 3000+ (Socket 754 AKA Athlon 64 mod) Usually retails for 100-135 (approx.) and it offers much better performance than Intel's affordable processor line (Celeron, har).

I'll use it for a short period of time (I'll order the Turion from Ewiz (not many websites (that ship to Canada) have it) soon), during those two days the PC will play a few games and be benchmarked so I can see the real difference between the Turion and the Sempron.

Submit your offer, and I'll send you a Paypal URL.

Nevermind, I cancelled the order... Voltage incompatible, would've have fried the Turion.
