---

I have finally gotten 2.1.3 finished and out  
get it from <http://www.sourceforge.net/projects/rentools/>

Changes since 2.1.2:

A few bug fixes (cant remember what, crash fixes mainly I think)  
new console commands to disable and enable the client chat log  
A better description of how to add a chat hook has been added to the documentation (in bhs.txt)  
I added code to disable certain network interfaces that could be used to cheat.  
And I added code to block people with an invalid nickname (since they cant be kicked by normal means)  
Blocked nicknames are those with:  
Nickname length = 0  
Nickname length > 20  
Nickname = Hostname  
Nickname has non-ascii characters (i.e. below ' ' or above '~')  
Nickname is all spaces  
Nickname matches a name already in use on the server  
This code replaces the existing bandtest.dll fix (so you dont need it anymore, I suggest removing it in case it conflicts).

I am not sure exactly what will be coming out next, I want to go through and audit the code for bugs and memory leaks and stuff.  
Plus there are some things wanted for SSAOW and some stuff Reborn wants and a few other things I have in mind, its just a question of how much time I can spend on this.

Does this version make the crashing less? I had problems with the some of the lastest versions that made my game crash unbelievable much.

I did fix some crash bugs I think.

If you still get crashes with 2.1.3, post the \_except.txt file you get from the crash so I can look at (and hopefully fix) it.

I also need information on what was going on at the time of the crash.  
If others in the same game who have 2.1.x also crashed, thats usefull info too.

Hmm I play mostly in the BC servers and because they run their own scripts.dll I can't help you by giving the \_except.text file.

But I can say that with this new scripts.dll the game crashes way less, I have been playing 4 hours and I didn't crash a singly time.

if you are running 2.1.3 on your client machine and it crashes (regardless of what Black-Cell or whoever else are running on their servers), I need the \_except.txt from your client machine.

I had a crash to, 2 times at the same point. It's in the beginning of the mission: Tomorrow's tech today.

When Nod drops a stealth tank. As soon the stealth tank reaches the ground, Renegade crashes.

I've added the `_except` file.

Here's the `_except.txt` file from when I was running 2.1.2. I know it isn't 2.1.3 but maybe it can help. Also I had no crashing playing online for 8 hours with 2.1.3. Only 1 time that lagged me out 5 times in a row.
