I have been using RenGuard for a while now, but I haven't been playing much lately, so I do not know when this started, but I noticed a couple of weeks ago, RenGuard would not be recognized by the server I was currently playing on, resulting in my being "!forcerg'ed" a few times. Naturally, this is quite irritating when I know RenGuard is running and it says that it is running. I have tried reinstalling everything from RenGuard to Renegade, but to no avail. Why is this happening?

-Hirken

Also, my apologies if this has been brought up before, but this is my first post here and I do not have the time for an extensive search.

Are you sure you have the latest version of renegade? also, it could be your firewall setting is too high.

I hate to say it Tecstasy, but you're a fucking idiot. You were getting killed because of lag. It was terribly obvious those people weren't cheating, because they sucked.

I have the latest version of Renegade, or else I wouldn't be getting into the servers in the first place. And I turned my firewall off.

I didn't see any of that shit, and I was in the game a lot longer than you were. And you should know, by now, how 'ghosts' of people can appear due to lag, in completely different spots on the map than where the people should be. What are the chances of having two players with mediocre scores and K/D ratios being RenGuard bypassers in the same server at the same time? Especially considering I've never seen anyone that looked like they were cheating while running RenGuard.

wow Lijitsu you obviously didnt read what i wrote there was no way a shot was possible unless they were in the agt with me which they wernt second of all i nknow how the ghost in renegade work and that couldnt be the reason other people pmed me and complained about the same thing and a few of us left im not gonig to argue anymore the fact is theres still ways to bypass rg its not fail safe

Alright, just for the hell of it, im going to state all the grammar problems i have found in his post, short of apostrophes.

Capitalize letter. Misspelled "Obviously." Misspelled "Didnt." No comma or period. Didnt capitalize "AGT." No comma. Misspelled "Werent." No comma or period. Misspelled "Know." Incorrect grammar: "i know how the ghost in renegade work." Misspelled "Works." Misspelled "Couldnt." No comma. Didnt capitalize "PM." No comma. No comma or period. Misspelled "Going." No comma or period. Did not state word: "That." No comma after "That." Didnt capitalize: "RG." No comma. No ending period.

Now, to stay on topic of his post:

Alright, so lets say that this person was hacking. Do you remember his name? Did he get the kill?

Were you lagging even the slightest bit? Are you a complete idiot?
Dont answer the last one, its obviously a "YES."

You're prone to grammatical errors yourself, so I wouldn't necessarily be correcting everyone else's willy-nilly there, champ.

Its a random bug somewhere along the RenGuard Network or SSC. It should go away after you restart RenGuard. I was having a lot of trouble with it a day or so ago.

Actually yes, i as having the same problem as the first guy, i have RG and i was gettin lforcerg all the time, im pretty sure it was just a bug for that particular day because now there are no prblems, my question is, is there ne way to fix this problem/bug so you cant get forcerged?

It is consistent. It will not go away. It happens everyday, restart or no. I have reinstalled EVERYTHING, RenGuard, Renegade, everything, but nothing fixes it. It runs, but the servers do not recognize it.

What is the account you play under?

Does RenGuard actually say it's connected to the network?

Start RenGuard and Renegade, join a server as fast as you can, and !rg yourself. If it says that you are running RenGuard, then your connection is probably dropping shortly after, which would be an indication of either a firewall or lag issue.

I sign on under one of my WOL nicks, and no, I do not change it from the one RenGuard signs on with. It does indeed say that it is connected to the RenGuard network, and I've tried disabling my firewall. Nothing works. It now has about a 10% probability of recognizing RenGuard, but that is it.

The best way to help you is to look for me in the support chat.. I can perform a manual lookup to find out if its RenGuard, or you..
