Does anyone know a way to change what executable is launched when you select Multiplayer-gamespy-join in Ren menus ??

I want it to launch a different program than crappy ol gs

Thx

Use a server browser like ASE (<http://www.udpsoft.com/eye>) instead. That'll allow you to look at all the servers, and will automatically launch Renegade when you join one.

Yup, that what i wanna use but I wanted to know if u could make ren launch IT instead of gamespy through the menus. In other words, go into ren -> multiplay -> gamespy -> join and have it launch eye so i dont need to exit from ren (coming from wol)

This post has been remove due to it containg information that could potentially cause exploits in the WOL laddering and Ranking systems.

DuntDoes anyone know a way to change what executable is launched when you select Multiplayer-gamespy-join in Ren menus ??

I want it to launch a different program than crappy ol gs

Thx

A simple fix would be to install your 3rd party client in the GSA folder and rename YOUR

Have fun
