Hello,

Since a few day's I can't startup Renegade anymore.

Every time I try, Renegade will turn on black screen and I need to reboot my PC.

I think that the problem is my video-driver because I don't have any 3D anymore. Everything on windows that has to be 3d(like some screensavers) will turn white or black.

Can somebody help me solve this problem?

Many thnx,

bbtKiller

It's your video card/video card drivers, man. Either that or your d3d is b0rked...:S

That it was my video-driver is old news ^^ but it's a complete new video-driver and it worked very fine till I changed the mainboard (2 times from a new one to a old one and back)

It's very strange but I think really that my 3D is blocked but how?

I have a Nvidea Gforce FX 5200 (128 mb).

So If somebody can help me solve this problem...
