Our clan banned someone from the server under several names. Now we want to unban that person. I got all bans out of the brenbot.dat I think but when the player tries to join now, he still gets kicked "xxx got banned at 01.01.1970 by for (no name or comment). Any idea on how to unban him anyway?

I didn't have this problem with other persons...

Its an orphan ban entry.. try to remove it from brenbot.dat, possibly in the ipban table, or rg ban table. The main ban entry has been erased.
