For some reason these computers have had the ability to use a flash drive disabled. I can access just about everything on the account I am using, but I can't find out where this could have been disabled at.

Anyone have a clue where this would be?

Contol Panel ~ Administative Tools ~ Computer Management ~ [+] Storage ~ [+] Removable Storage ~ [+] Libraries

Right-Click anything that says "USB" ~ Properties ~ Check "Enable Drive"

Repeat for any listed.
Also check the bios, i think on some there is the option to disable them there too.

It is enabled in there, the computer recognizes it exists, but it does not show up in my computer.

Ok try that, if it shows up in there, manually type in the drive letter ETC

Welp the only other way i can think of at the moment would be to just start typing in drive letters starting with the one after the last used. Ill post again if i think of anything else.
