Your really unhelpful you know. The purpose of this forum area is to ask questions and hopefully get answers. If you don't have something useful to say then don't post.

Why do you need a patch to stop gameplay pending, if it's simply to test maps on your own host a single player LAN game, non dedicated, and that will do the trick.

If you can tell us why you want it there's possibly a better way of doing what you want anyway.

email it, upload it to www.yousendit.com, upload it on an ftp server, upload as attachment on these forums...

there are lots of ways to send something

ok, I give you a website to upload:
(please zip or rar or gz or 7z it before upload)

<http://www.hkto.net/freefileuploadspace.php>

This program is written by me and shouldn't have any problem.

isnt the server.dat the same for lfds?

just fix it on windows the upload it to your linux server

just fix it on windows the upload it to your linux server

Wont work because the Linux FDS have all things in the "renegade_server_1037b_rh7-3" and it dont use the server.dat

In fact I have tried to search out which bytes have the "No Gameplay Pending" wFDS patch changed, and try to make the same modify to the LFDS binary, but I cannot found the same bytes for me to change. Who can help me on this?
