How in the world do you make the treads on the tank stretch properly. I can get them to move up and down but not stretch. What do I do?

Elaborate man, I'm having trouble trying to figure out what you want. Try a face or box UVW?

PICTURE TIME! My current treads look like
this.<http://www.n00bstories.com/image.fetch.php?id=1156402318> But I want them to act like
this.<http://www.n00bstories.com/image.fetch.php?id=1756157057> I believe that put it in proper
terms.

I didn't see anything about WW skins, or any file that contained information about it. If some could tell me about WW skins it would be helpful. [November 26, 2002, 09:12: Message edited by: Gernader8]

I was going to do a tutorial on using WWSkin, maybe I will later tonight. Anyways, it's in the Howto>W3D tutorials> check the index file for the link to it. The hardest thing for me was finding where the WWskin was located, since gmax doesn't have a spacewarps section like max does. It's by the material editor button.
