when I play on servers Jelly-Server and n00bstories, they do not see my normally working RG and then they kick me instantly after I log in or after several minutes of playing... what is the reason and how can I get rid of it?

---

---

This same thing happens to me sometimes in Unrules New Maps. I got kicked because I was sniping, and doing pretty well. I got a Stealth Black Hand in the head when he ran by me. Then two or three snipers, one of which was shooting at me, and another who was shooting at my ally.

my problem is that i play only original CnC mode , and i know only four servers with it  
1.) RenArchive(both Main & Pistaserv)- often empty cause of my location. while time is 16:35 now in Moscow region, in US Central it is 7:35  
2.) Non00bs. I hate their rules & this serv is either full(i get infernal lags) or totally empty.  
3.) Jelly-Server. kicks me. I played 15 minutes there. i killed one Nod Flametrooper with my MLRS, and when i entered with other GDI to Nod's half-destroyed base, i got kicked.  
4.) N00bstories. kicks me instantly.

others are with different mods like Capture the Flag, Marathon and others. I don't like them. the only mod I appreciate is AOW. but normal CnC is better i think.

Jelly and Noobstories ask me to activate RG. but it is active and it works normally but they kick me anyway

For the timezone problem: you might want to try and play on european WOL.

Does the renguard window give any message after you were kicked?

RG doesn't give any messages when i am kicked.

and about timezone - European WOL is also always empty

for me, it says YOU ARE NOT USING RENGUARD! But i actually am  
i have it running when i get on, but it closes when im playing, and reopens when im not

Do other servers (BC4/5 for instance) detect your RG?

Lmao, I was wondering why Gotzow was saying to go to european WOL. Since it has become XWIS and all locations merged.

@bluethen how do you know it "closes" when you play. Normally it drops down to your tray area, which is located at the bottom right corner of your screen. Since you claim it reopens when you stop playing, I find it hard to believe it ever closed, but just minimized to tray.

I notice because if you Alt+Tab, you'll go to the desktop.

what resolution is that? 1280xwhatever ??

I am still stuck with two x 1024x768 ... gives combined desktop of 2048x768, so I aint complaining  
^^

All you gotta do to find out what resolution he's running is download the picture and figure out what size it's at.

dont be silly, thats too sensible

\*smacks self over head for not thinking of that\*

btw, nice resolution... wish I had monitors that supported that ^ but then again I like my little 15" TFT's
