I was wondering if someone could make a map based off de_dust from Counterstrike. Even better would be if someone could make it a "bomb" scenario. As in everyone spawns on GDI with regular repair guns, and there would be PT's for buying stuff. Nod would get 1 nuke, and if the carrier was killed, it would be dropped for only Nod players to pick up. The bomb sites would have pedestals. If anyone could do this, I think it would be sweet, even if it has to be altered a bit for the Renegade engine. Also, would it be able to make a 1 life system and have rounds like CS?

Thanks very much!

Why dont you do it your self?

<http://www.renhelp.co.uk> has some great mapping tutorials
