websiteNow there is for the first time a technical conversion of the "Alfven waves", which could introduce "a new era in the area of the propulsion technologies in the universe"...the technology is ten times a higher flow-out rate, which otherwise only by a nuclear fusion engine - which (still) does not exist - is attainable. The measurements were accomplished on the basis a prototype in a vacuum chamber

I love babelfish.

Quote:the thrust of a rocket can be drastically reduced increased, at the same time the fuel consumption, so the idea.Yeah. That makes sense...

It's a nice read, though.

Do you play it? It would be cool to play with someone from the forums. Some asshole stole my "Deerwalk" name on it though.

This is the last thing with my old name on it from C&C long live deerwalk.
