I'm encountering a problem very similar to this old post:

"I recovered my computer because of recent viruses... my computer recovers most of what i have on the comp before i restarted windows and it saved renegade and renguard.. i still have to re install them for drivers etc. so i re-install renegade and i came here to get renguard but whenever i load up the setup it says 'Game.exe already exists in C:/Westwood/Renegade/ cannot install' i have searched for renguard and i looked in westwood/renegade but i cannot find renguard... how do i uninstall it or get the setup to work?? someone please help me..
ok i just deleted the old renegade files.. now it says 'C:/Westwood/Renegade/ RenGuard must be installed in your renegade directory' and then it doesnt install!!!! AHH someone help me!"

Here's what's different: I uninstalled Renegade and RenGuard. I then reinstalled Renegade and made sure it was updated to it's fullest potential. I have not downloaded any mods that might alter the main game file. When I download RenGuard and send it to my Renegade directoy, it still says 'C:/Westwood/Renegade/ RenGuard must be installed in your renegade directory'. Is there a way to fix this without reinstalling five times hoping it will work, because it takes forever.

Delete the registry keys for RenGaurd and then try to install.
