Host it on imageshack

<http://www.imageshack.us/>

Go to user cp.

Then the direct link and put tags on the sides of the URL.

he means host your image. Copy the link to it...go into profiles and type: [ i m g ] paste your link here [ / i m g ]

where it asks you to type what you want in your signiture.

PLEASE NOTE: do not put spaces between the letters and digits like I did. I only did this to illustrate what you needed to type and to avoid the little red X appearing that you deerwalk post!

hmmm

works for me...

nvm that's coz its / not \ at the end of the img html

If you have it set right as:

[img]http://img482.imageshack.us/img482/8352/imagefetch6co.jpg[/img]

Then go into your settings and make sure that you enabled your signature. Sometimes if you don't put in a signature, the forum software will automatically disable it for you.
