Try again. Hopefully BHS has the issue resolved for the final time.

I'm getting the same message you are. I've never gotten it before but I am now. Wish I could tell you how to fix it but I'm stumped myself. Your not alone.

It is because of Xwis. I also get it but only if I'm connecting to Xwis servers, not if I connect to WOL.

Hi there,

i have the same problem ...

Since connecting to XWIS i get buffer overrun messages from the renguard client. (On Windows XP sp2)

Lucky enough, only on rare occasions.

Regards  
DethABug

It's something RenGuard side, there's nothing wrong with your PC or Renegade.

Yesterday i had it too and with me 5 other persons were kicked from our server. It seems it happens at many persons at the same time who all get disconnected. It was around 9 PM gmt, can't remember exactly. Does this have smth to do with testing of the new beta?

A couple of hours testing this and that and I have figured out what is causing the Buffer Over run in my case

\*\*\*\*\*

#### MULTIPLE FIREWALLS

\*\*\*\*\*

I am willing to bet somewhere between your system and your hardware you have multiple firewalls causing a conflict between firealls or proxy's. Most routers have firewalls and when you adapt one to your system this cause a conflict between the two giving you a buffer overrun.

\*\*\*\*\*

This fixed the issue somewhat for my system. I removed my system firewall and hacked the reg keys to make sure and I no longer have the Buffer Overrun error.

The trick would be able to allow all renguard process to pass your firewall and then dmz zone the system theortically and it should work as well.

Havent tried that one yet, will get back to you after I have logged all the processes for Renguard and then set the firewall up to see what happens

Just started getting it today. No clue why. Could be related to resolution? It didn't happen at anything under 960x600, after going up to 1024x768 my game would suddenly drop its FPS and then pop up the RG error, and kick me from the server of course.

...

It'a Renguard sided, it's not your PC, Renegade, Firewall or what so ever.
