i was banned for apparently trying to use renegade.exe exploit . was it because of my having problems with GS Arcade as it wont show my fav server so i kept adding it manually and kept starting to join it, but when renguard start up screen comes, i hit cancel, to check if my fav server would show in server list already and cause it didnt, i kept trying to do the same procedure, did it like 4 or 5 times, hitting cancel when the renguard screen shows up.

thanks to mac, he lifted ban after i spoke to him in chat, but now im afraid to use my GS Arcade cause this might happen again and then noone would believe me anymore.

thanks

tthom

I also recieved a warning about a LAN exploit that "had been logged" and this happened around the same time.

I only have 1 PC on my dsl connection, and i havnt messed with the game.exe or game2.exe at all.

Is it possible that it was a glitch if it happened around same time as tthoms message?

The LAN exploit that "had been logged" can be ignored.

ok , thanks.

It just happened around the same time , so i thought it may have some bearing on it.
