Are you talking about your grammar or your Renegade problem? The problem is no one here can understand what your saying. Take your time and type out your words. It also wouldn't hurt to form complete sentences.

ok ok.I will type in complete sentences.The main gist of the problem is i cant install Renegade because this error message "E:\Setup\Setup.exe was not found" keeps appearing when I click on autorun and then no installation wizard or window appears.that is why i couldnt install Renegade at all.

Sounds like a problem with your CD Drive not the actual Renegade disc.

Anything from the motor being broken to the laser being out of alignment? Who knows.

Try it on a friends PC, see if it works, if it does, then the CD is fine and something to do with your PC is wrong.

well but i've tried other disks like C&C Gen and it has worked perfectly fine for me. i mean i can still

play that game but its just only for Renegade which cant be installed till now.and if i compare the extent of the scratches on the disk of Ren to e one on Tib Sun, i tink the latter is worse since its much older.yet i still can play Tib Sun.so i guess it isn't the CD drive's problem.

Just looking at the scratches won't let you know.

You can have deep gashes on CD's, but as long as the PC can correct the errored data you are fine.

Try the CD in a friends computer

so you are saying that tryin on my friends PC can correct the errored data? or is it possible to get rid of the so-called "gashes" on my CD?

test on a friends PC will tell you if the problem is with your CD or your CD Drive

if
a) the game will install on friends pc then your CD Drive or something else in your PC is not working

b) the same problem occurs on friends PC then the CD is damaged.

No, XWIS doesn't make you able to download the 1.037 patch in-game, you need to manually donwload it. On your dad's laptop enter this link:

ftp://ftp.westwood.com/pub/renegade/updates/Renegade_1037_English.exe

no as in i did manually d/l e patch but not from the url u gave me.it was from another site n this version mismatch error appeared in e lobby as mentioned in my prev post even after d/lin e patch frm tt site (not from the url u gave me).so if i d/l frm this url wudnt it make no diff?

how many servers did you actually try to get in? sometimes it gives version mismatch if it didnt login properly, try logging in to WOL/XWIS and then logging out again, and the login again.

You should make sure you are asked for username/pw AND get the MOTD on entering the server browser. otherwise the login probably didnt work properly.

ok now it finally worked.so from ur prev posts, i assumed that its my CD drive on my own comp thats givin me e problems which was y i couldnt play Ren on it?coz i did what u said n tried it on my dad's laptop which worked.so wat could b e problem of my CD drive on my own comp which wasnt present on my dad's laptop?

could just be a dirty laser, misaligned laser or just wear and tear on the CD drive, or it could be something else entirely...

so u r sayin that i should replace my CD drive if its e cause of e problem?but apparently it seems not coz i could still play other games like Generals (n even TS!) they still load up without much of a hiccup so e cause is mayb not on e CD drive?then wat else could b e problem?haiz anw my comp is nearly 4 yrs old but its a p4 win xp 2.4ghz.quite a high-end one eh at that time in 2001?so i really hope i dun hav to replace it juz coz of e CD drive haha coz its long from being obsolete yet=) any more suggestions? thx

You can replace a cd-rom drive without having to replace your whole pc... A normal CD-writer - DVD-reader combo should cost you about 60 € nowadays, I think. A DVD-writer a bit more towards 120 €.

BTW: P4 2.4 in 2001? That is AMAZING

hah END 2001.u seem not 2 belive it or wat?coz like i said that was 1 of e best at that time..now if u compare with e current high-end ones,really pales in significance.

but its really impossible for my CD drive to hav any problems when i can load up other games which i hav mentioned in my prev post on it, am i right?hope some1 can clarify my doubts...thx

loading a game does not need to read the cd much, installing it requires the cd to be read in much more detail, and is when something like a misaligned laser would cause problems.

When you load a game all it really does is look at the cd and ask itself, is this the CD I am looking for or not
