I got this handgun from a pack of unused WW models.

The clip was stuck inside of it so I asked uhhh... dark angel i think it was and he got it out for me!

It works fine except.

-When it reloads the gun is thrown away and the empty clip is kept?!\*\*Handgun only\*\*

-No muzzle flash when in 3rd person mode! (or when watching someone else fire it)\*\*both handgun and m16\*\*

-The pistol appears to be sticking out of the person's back!

I will attach the files below. Includes W3D for 1st person mode 3rd person mode and back model for both guns w/ texture.

Plus the W3D files.

(handgun only has one gmax file couldn't find the others)

I got the same problem when I put a gun model into the game that I made, though it didn't throw away the gun until I made a clip to put in...

Post screenshots and I can better understand what you are talking about.

From what I can tell:

Quote:-No muzzle flash when in 3rd person mode! (or when watching someone else fire it)\*\*both handgun and m16\*\*

For the muzzle flashes...

1) Create your muzzle flash or use one of Westwoods. Export it as whatever. (Example: mz\_v\_nod\_buggy.w3d)

2) Open up your rigged vehicle in gmax, create a box. Move the box to where the muzzle flash should appear. Name it mz\_v\_nod\_buggy and go to the W3D settings. In this case you would want to use mz\_rifl1 as your name

3) Uncheck export Transform bone. Check Aggregate.

4) Link this (This as in your muzzle flash aggregate) to your muzzle bone.

Hierarchy Tree:

Turret

\_Muzzlea0

\_\_ mz\_v\_nod\_buggy

\_Muzzleb0

\_\_ mz\_nod\_buggy

Tip:

You can have as many boxes with the same name as long as they have the W3D settings shown above. If you get an error while exporting, check your w3d settings on the corresponding object.

Quote:

-When it reloads the gun is thrown away and the empty clip is kept?!\*\*Handgun only\*\*

For the reload animated, it is probably not setup to work right with the pistol animations.

I DONT KNOW WHY THE RELOAD WONT WORK RIGHT...

I tried naming the parts of my gunj exactly the same as the parts of the pistol (used w3d to gmax exporter and checked things too)

It was exactly the same except for the texture and the midel and it still wont work right...

and that thing with the buggy and the... uhhh you lost me after the first sentence i tried but huh?  
its ben so long sence i used gmax i cant remember shit...(i made these guns awchyle ago)

Well, Let me take a look at these W3D Files. If there isn't too much work to be done I'll put them in-game for you.

Fomr the looks of it, It looks like on the pistol one of the textures is applied wrong. That's one problem I saw.

Try the W3D files i included put them in renegade data and go ingame and reload and fire the guns in 3rd/1st person than look at the handgun when it is on youre back.

I will attach the files below. Includes W3D for 1st person mode 3rd person mode and back model for both guns w/ texture.

Plus the W3D files.

(handgun only has one gmax file couldn't find the others)

The gun is being thrown away because it's linked to the wrong bone, you have the gun linked to the reload bone and the clip is probably not linked to anything.
