Hi all,

I've got a little problem with my FDS:

I installed my fds Correctly.

I can game on it if I join the server though Renegade IP or with ASE(No favorit server he is in the server list.)

But when i start GameSpy I cant see the server... Does anyone know how to fix this problem.

I have opened ports: 4848UDP 25300UDP 5000UDP in my firewall.

you cant see servers hosted on your IP address on gamespy, but other people probably can. ask someone on msn to go on gamespy and look for your server when it is running.
