Thanks, but your congratulations come somewhat late as I found out about that command the moment before I downloaded the beta of whatever new patch that contained this feature (I can't recall what version it was). Have you ever set your settings to minus -insert random number here-? It's pretty fun (that's one of the multiple results I got). :0

By the way, there's a server on XWIS that still allows vehicle settings editing in a multiplayer game, but saddly you tend to warp around when you change them. :\

What does that have to do with my map? You edited the vehicle settings yourself.

And why would you think this has something to do with your dumb map?

Well let's see, maybe it's because I released this map about a day ago, and he possted a link in that topic leading to this topic?

It was so large that I got bored and started doing that. Happy now?

I really suggest you make a "flying" version of it, because incredibly huge. Also I find it somewhat abnormal that my X800XT is running this map at an average of 46FPS (the map's covered with a dense fog for fucks sake) at resolution of 1280x1024.

EMO!!!

Well nice movie it was different. Which is a good thing.
