Subject: "SpyWOL" for linux?

I have notice some posts by Blazer on this forum mention that he will make a program that enable WOL support for LFDS, those are posted on 2004 and now is 2006. I still cannot find it. Is it already released somewhere or Blazer just left it undone?

I guess Blazer simply never finished it   Could someone PM me what basic WOL server protocol is like?

It is an IRC-base protocol. I think we may ask XWIS for details!

I still plan on doing this...one of the things holding me back was things like aquiring and implementing the protocol to report to the WOL ladder server....but since XWIS has no ladder server, maybe I dont have to bother with that now :-\ There are still issues with NAT that i need to work out as well.

Great, when will you finish it & release it to the public?

What was that about bots on XWIS?

But seriously, nice job!

But seriously, nice job!

1. Strike Team is aware of my efforts.
2. This "bot" on XWIS only emulates the normal FDS, there are no extra commands or interaction necessary.
3. I am an admin on XWIS, so if my bot does anything naughty, I will ban it

Thanks for the compliment, I'm very happy to have gotten it working.
