Bug Report:
Renguard crashes on startup, this crash is caused by a process with the name LVPrcSrv.exe (Logitech USB Webcam drivers).

This bug might also affect Renguard 1.04

The only advice I can give you is:

Update your Logitech USB Webcam drivers to the latest version and this should fix the error.

Sn0WDr4gon:
How are you sure that it is the logitech USB webcam drivers which is causing the crash? All I see is a screenshot that only shows game.exe crashing and the logitech USB webcam drivers selected in Process Manager. It doesn't display anything else important.

Yes I am sure, upadting them dirvers has no effect, the process stays the same.

I don't have any debug info anymore, bt I do know that it's the process shown in taskmgr. I'm not a noob you know

Simple solution is kil the process, but it's a bit lame isnt it?
