Last night I un-installed Renegade to get rid of my skins (I had a lot and I couldn't remember all the names) so when I went to reinstall RenGuard, I had constant errors, and disconnections to where I couldn't even launch Renegade even without RenGuard! Not to mention all the errors It went through just trying to install it! It took me until 12:00 to finish. Yeah that sucks.

P.S. I can't believe no one thought of using their actual names in the forums! I mean Allen, how original is that?!

Windows Search -> Renegade\Data folder -> Search Query: .dds / .w3d / .wav / .tga (except the gamespy one).

You only need to get rid of your skins if you plan on playing in a pure server. RenGuard doesn't block them.

David John Mason, 'nuff said. I don't get this internet alias crap. If most forums etc. would allow it I'd use Dave.

Oh, I just use an alias 'cause I don't feel like giving out my real name outright. If someone asks, they could get it easily enough. Additionally, I really effing dig Dr. Lithius.(So much so I crappily

---

PhotoShopped his HAR Pilot Profile image into something more fitting.)
