Subject: Core Patch 2 Release Candidate 1 is available for download

Posted by [jonwil](#) on Mon, 06 Feb 2006 11:30:52 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

For client players, download and run this:

<http://download.renguard.com/cp2/download.exe>

It will download Core Patch 2 Release Candidate 1.

When the final version of Core Patch 2 is released, we will release it through RenGuard like Core Patch 1.

Clients will get scripts.dll 2.3.1.

Server owners can choose from sripts.dll 2.3.1 or SSAOW 1.4.1 (with the bhs.dll from scripts.dll 2.3.1 including all the 2.3.1 fixes)

For linux servers with Core Patch 1 already installed (i.e. brenbot, proper LFDS binary etc), download and run this

<http://download.renguard.com/cp2/sscp2.run> (its a shell script with a TGZ file on the end)

For linux server without Core Patch 1, download and run this

<http://download.renguard.com/cp2/sscp2all.run>

For windows servers with Core Patch 1 already installed, download and run this

<http://download.renguard.com/cp2/sscp2w.exe>

For windows servers without Core Patch 1, download and run this

<http://download.renguard.com/cp2/sscp2allw.exe>

The linux installer uses makeself to make the installer and the windows installer uses Nullsoft Installer (since its my first time with Nullsoft, hopefully I got everything right)

It would be good to see some servers run Core Patch 2 (especially the new maps)

This is Release Candidate 1 of Core Patch 2.

The following issues are currently known:

The windows installer does not make sure the location you type in to install CP2 into has a valid install of CP1 or of the windows FDS (I plan to fix this for RC2). Also, it doesnt add the new maps to the rotation (I also plan to fix this so that the option is there in RC2). And, the readme file has to be updated (at minumum, mac needs to be added to the credits for his help with CP2)

Please report any issues with Core Patch 2 Release Candidate 1 on these forums so everything can be kept in the one place. If it is something that needs to be kept private (e.g. an exploit), private message me with the information.

Questions are best asked by contacting me through MSN, AIM, ICQ or Yahoo.

The window of the installer should be a little bit bigger, now you get those moveable bars.

Note that you need to have RenGuard installed if you are installing the client CP2 patch (you dont need Core Patch 1, the installer will install the needed bits for that too if you dont have it installed) Also, the download.exe must be run in the renegade folder (the one with game.exe and game2.exe in it)

If anyone gets an error with CP2 saying "old file does not exist", post here with the filename and the size in bytes of the file.

Also, if anyone gets a RenGuard error saying that <some file> is a bad file, please post here again with the filename and file size.

RenGuard works for me now. I do think that you have to re-do the installer a bit.

As for bugs, the installer reports that it just finished installing CP1 when it's done. The installer for the windows server is WAY too big (84.6mb isnt considered a patch, it's considered a replace all files that arent the same). There is at LEAST 109mb of redundant data that shouldnt be included (the files patched instead)

saberhawk wrote on Mon, 06 February 2006 19:45(84.6mb isnt considered a patch)Corepatch 1 has 100MB when unzipped...

When CP2 will be released as the final out to public, can I download it separately (not with RGs assistance) like CP1? I'm keeping all files for Renegade in a folder on E:\ to archive them.

Yes, but the 115mb (and counting) are files that are compressed into the installer, instead of stored as patches to the existing files.

Work-around for the FieldTS version error:

Download the stand-alone version of CP1 from [http://download.renguard.com/standalone\\_cp1.zip](http://download.renguard.com/standalone_cp1.zip)  
Install it into a temporary folder (it will give you a 'file not found' error, but it will give you FieldTS first)

Copy C&C\_FieldTS.mix from the data subfolder of your temporary folder to your Renegade data folder

Install CP2 RC1 as usual

Delete the temporary folder

That's how I got CP2 RC1 to install...

The copy of FieldTS that CP2 is looking for should be the exact same one as CP1 installed.  
If it is not, I need to know.  
And I need the FieldTS mix file that CP2 does not like.

Anyone having problems with "old file not found" type errors should post the following:  
Which file it is.  
What size the file in their renegade folder is in bytes  
Plus whether the CP2 installer downloaded patchall.zip or cp2.zip.

Do make sure you run download.exe from the renegade folder (the one with game.exe, game2.exe and scripts.dll in it).

When we release final version of CP2 through RenGuard, we will implement check to make sure that files in renegade folder are what CP2 is looking for.

Oh and guys, this is a Release Candidate. If you don't want software that may contain bugs, do not download and install this. Wait for the final release of CP2.

---

Thanks

(though, now the font is weird again, as I've gotten used to the CP1 font I guess you just can't have everything )

If you actually want it back open up stylemrg.ini and replace 4 lines that are already in it with this:

```
FONT_INGAME_TXT=Lucida Console, 8, 0
FONT_INGAME_BIG_TXT=Lucida Console, 16, 0
FONT_INGAME_SUBTITLE_TXT=Lucida Console, 14, 0
FONT_INGAME_HEADER_TXT=Lucida Console, 9, 1
```

And Trunkskbg I'm not having this problem, I do think Last\_Stand looks like crap and I'm definatly sure that GDI will win the map 66% of the time. I mean, even the beta version of Pompeii.mix looks and plays better.

Core Patch 2 Introduction  
 =====  
 Blackhand Studios(TM) proudly presents "Core Patch 2". This is the 2nd unofficial patch for C&C Renegade. In this Read Me you'll find more enhancements and fixes to make your gaming experience much more enjoyable. Some of the enhancements made where applied to the Harvester. It no longer Spawns invisible when you lose the Power Plant. It's mechanical arms are now animated while it collects Tiberium. With a faster load time( as fast as "Ren Alert") and many more Console Commands and enhancements (thanks to scripts.dll 2.3.1), this 2nd installment from Blackhand Studios should pack quite a punch.

Along with this release comes additional maps. C&C\_BunkersTS, C&C\_Terrace, and C&C\_Tropics have been added to the mix along with a new map specially created for Core Patch 2 by Titan1x77 called C&C\_Last\_Stand.

I completly reinstalled everything in my order.

1. Renegade
2. Official Westwood Patch 1.037(English, French, German, Chinese, Korean or Japanese)
3. Renguard.
4. No-CD Fix(Game2.exe version)
5. Core Patch 1
6. Core Patch 2
7. Custom skins, ect

Got everything working perfectly again{Good for me I guess}. However this time I didn't get that "error 2" error in the consol window again. The consol window did not appear at all actually, which I guess is a good thing.

Instead of installing CP1 and then updating to CP2, you should install the FULL CP2 without CP1 pre-installed. But I think you installed the FULL CP2 over CP1, which might've been the problem.

ok, something for people with errors to try:

If you have installed CP1 (especially CP1 standalone) and the installer is downloading patchall.zip (not cp2.zip) open up regedit and go to HKEY\_LOCAL\_MACHINE\software\RenGuard and check the patch version key. If you have CP1 installed, it should be 1. Zero means no patch installed and 2 means CP2 installed.

If it is set wrongly, change it and try installing CP2 again.

Did the CP2 installer download cp2.zip or patchall.zip?

I got cp1  
It downloads cp2.zip

But now hang on..  
I started download.exe again and now its past Always2.dat  
It now stops on CC\_FieldTS.mix

Old file not found. However, a file of the same name was found.  
No update done since the file content does not match.

That file is 12,8 MB (13.424.461 bytes)  
I didnt change anything..  
You must have installed a map pack that contained a different version of FieldTS from what CP1 included...fish the CP1 version of FieldTS out of the CP1 installer...

Hey,

Just reporting that I had no problems with CP2.  
Installed like a dream first time, without a problem.

PLEASE CHANGE THE LOAD SCREEN THOUGH...

Great work BHS.

Is anyone else having their game just crash for no reason? 3 times, it happened 3 times on Country Meadow today. No, it's not a bad map...it's actually pretty good. 3 times? Come on...is anyone experiencing this?

No warning, messagers or nothing. Just closes.

This is ridiculous.

As far as I know always2.dat needs to be 15396629 bytes in size, the file I uploaded was exactly that. I guess you'd have to ask jonwil since he made the installer.

Hi!

I think the "old file not found"-error has something to do with the installation-path, or better, what the installer IS THINKING what the installationpath is.

Fisrt, let me say Renguard & CP1 is Installed, everything works fine.

Then i got the same problem with CP2 installation: Installer stopped on file CC\_Canyon.mix (old file not found)

My installation-path is E:\Renegade, I started download.exe in this folder (where the game & game2.exe is)

After the installation has aborted, i saw that a new data folder was created on harddrive E: (E:\data)

And in this directory the installer cant find those files of course...

But how can that happen? I started download.exe in the correct path?!?!

Greetings  
RealCaldi

As jonwil said before, there won't be a release candidate 2. Rather the next one will be released through RG. I sure hope it works how it's supposed to then though.

Are you still waiting for the readme to write itself?

A big part of why CP1 worked for so many people is because of the precheck that RenGuard does which makes sure the files you have are the files CP1 wants and if they aren't, points you at the right files. The same precheck will be in place for CP2 but for now, I have uploaded the files the precheck will use and posted links to them in the other thread.

I'd rather you find something better to do than complain about my legitimate complaints. If nothing is shown to be faulty because people like you kiss ass, nothing will get fixed.

So please, shut up. For your own good, since you're looking like an idiot.

Maybe you are blind.... I've posted a problem with detailed description WHAT I've done and WHAT

---

happend then to my installation.

After that i gave a small feedback, after it was working.

In my opinion, it helps more then permanent postings like "when you will fix this stupid installer ...."

And btw. iam not scared about that if some children are thinking, iam an idiot...

Ciao RealCaldi

Chokes on C&C\_FieldTS.MIX (old file not found even though it is there). Here is the map size:

11/28/2003 09:54 PM      13,424,461 C&C\_FieldTS.mix

11/29/2004 10:04 PM      50,241 C&C\_FieldTS.thu

I downloaded C&C\_FieldTS.MIX from CP1 and copied it into the data directroy and now CP2 works. I saved the old map if you want to see it.

Well it seems that most people are getting farther with it then me. Everytime it gets done downloading the cp2.zip(tried with patchall.zip too) it tells me there is an error and that i need to re-load RG and redownload.

I've downloaded both cp2.zip and patchall.zip about 20 times now and it is getting alittle old. I have even downloaded them manually, checked them for corruption, but i can't seem to get it to work.
