there are about 5 characters that i have noticed to be DXT5 rather than the standard DXT1 .dds
file format that you need for Renegade, double check the type with a Utility from
http://www.nvidia.com that will tell you the current file properties, so when you mod it, you can
match.

Yes, it is something to do with your directX file exporting. I don't have the link to the tutorial but
I'm sure if you use the search button at the top you'll find that a lot of people have had the same
experiences.
