I have played renegade for a long time with renguard. Every once in a while I would get a firewall error on my xp. If I deleted reguard and reinstalled it would work fine. This time it didn't so I did the add and remove program and took out renegade. When I went to reinstall it, it starts the install and then says it can't find the setup.exe file. When I install the program to another computer it works fine. This is an original disk. I have gone and did a file search and deleted anything to do with renegade to see if that was causing a problem and I have tried to copy the entire disk and running the install program from the hard drive with no luck.
Im sure one of you computer guru's can fix my problem.
Thanks for the time in helping.

moderator you can delete this one. lol

I got to reading through these sections and decided to try the easiest thing last like clean off the disk. worked fine. Man got to love those kids lol. Tried so many other things first. lol

Have a good one
