Hi guys,

can some in simple terms please talk me through how to use the protected users and !auth command on brenbot. I've established how to register users to brenbot, but is it possible to authorise yourself in the game without irc, like through chat.

i.e. when you join i guess you type !auth pass or something and it will authorise you but i can't get it to work. Do you have to pm the bot or something within the game and if so how do you do it so that your password is not displayed to everyone in the game.

thanks buffymaniack

it is !auth name from irc in the main channel where the bot is. Or better yet, set the password in renguard (under options) which will auth you automatically through renguard. Simple enough?
