Hi every1,

my Renegade was working properly for a couple of times and now I got some FPS issues, when I just start playing the fps is a stable 60 and a couple minutes after its have difficulty to run smooth and drop at 30 and stay around it. I dont think this is due to heat, my CPU is at 27C, case at 27C and graphic cpu on the video card is under 50C.

Anyway here my setup

CPU: AMD 64 Dual-Core 3800+

MB: Abit KN8-Sli

VGA: Biostar Nvidia GeForce 6600GT<

HDD: Western Digital SATA 300gb/s 200gig

Memory: OCZ Ultra High Performance Dual-Channel 2X512mb

PSU: Coolmax 600W

Thanks for help.

NVM I fixed it. I put PSU fan in high speed and its better now, may be PSU was getting 2 hot actually. The air blown out of it in low speed was freaking hot.

Holy \*\*\*\*

Phil, you're still alive!

drop by Xphaze will you?

www.xphazegaming.com in case you forgot.
