I have no idea what could be causing that.

That doesn't stop it from working, as it should in the most recent version public version.

Is it just that map or all of them?

The crash could be a result of a number of things, including missing script files. You can try placing these in your westwood/renalert folder before you try all of the above.

   http://prdownloads.sourceforge.net/rentools/scripts24.zip?do wnload

All you need out of that file is scripts.dll.

If it doesn't work, My advice to you is to uninstall everything dealing with Renegade Alert, Delete the folder C:/Renegade/Westwood/Renalert, [Assuming you installed renegade to it's defualt renegade diretory] Then try install this:

   http://www.cnc-source.com/files//pafiledb.php?action=file&am p;am p;am p;am p;id=418

After the installation is complete, install this:

 ttp://files.filefront.com/Renegade+Alert+Patch+09932B/;36591 46;;/fileinfo.html

You should be up to date after that.

Correction, you also need the BHS.dll file, or the scripts.dll wont even load.
