Okay here is my problem:

I haven't played Renegade for a year.

I pop in the CD to my laptop, my Desktop broke..

And anyhow, I install it. I then choose everything very carefully, I am cautious. But this time, I try to Auto Update, it says:

"There is an update, would you like to download it now?"

So of course- I click yes.

Then the window pops up.

The title is Downloading file (1 of 1)

I then wait for about 30 seconds, no blue bar or progress at all, the window disappears.

So I think I might aswell try it on the game

I try on the game, I go internet, then advanced server listings.

I go to "Testing Bandwidth"

A screen pops up saying "There is an update, would you like to download it now?" I say yes, again.

Then it says "Cannot find files" or something of the sort.

Please help!

The auto-updater won't work. Download and run this file:

`ftp://ftp.westwood.com/pub/renegade/updates/Renegade_1037_English.exe`

After that it should work fine. (You generally have to wait more than 11 minutes for a reply here)

Heh, well thank you a lot... This old player can return.

---

5 years playing...
