What do you think about my 73 trans am model?

I think its pretty good considering what I have to work with.

I'll admit the textures look like a little kid did them but all I have is ms paint to make my textures with so as you see im limited with resources and on top of that the only way to design the model was from looking at pictures online.

You can download it if you would like. It's all ready to be exported to renegade along with all the textures...

If you want to make better textures, you should get The Gimp.

Its available for windows and is 100% free (and great too).

Way better than MS Paint.

Not as good as photoshop but if you need all the 1000s of options in photoshop to make a decent texture for renegade...

I'd say The Gimp is pretty up to par with Photoshop, once you get the hang of it and figure some stuff out.
