pls help.i have just bought renegade.it was able to install but for some reason it will not start.this is my system.

microsoft windows xp home ed
version 2002 sp2
pentium 4 cpu 2.4 ghz
248 ram.

i checked a program inside the renegade disc(4got d name)n
i think it said my directx version was below the requirement
of renegade.but however,i already had directx version 9.0c.

the game program starts and sudeenly ends
pls help

Bizarre--DepWalker doesn't show game2.exe using ANY of the DirectX dll's at all--so I don't know why Ren needs DirectX in the first place--I do think that it could be a buggy version check in the installer that won't accept newer DirectX versions, though

Try downloading the latest patch of Renegade 1.037 form
here: ftp://ftp.westwood.com/pub/renegade/updates/Renegade_1037_English.exe
