I have made a map, pretty much 100% bug free except for one thing. Harvys keep getting dropped off by the C-130...so there is like a big traffic jam of them on the strip :S The GDI harvester is working perfectly, and infact I copied and pasted the waypoint paths for Nod cuz the map is symetrical...so I have no Idea why this is happening. Any ideas?

i have same prb just insted of ton of harvs coming i get one harv and coppers kepp coming it sucks

to fix you have to make mod folder beforu go in level edit 2when u chose mod package or what ever so u have to make new map and eveything

that sould work it worked for me

easyist way to see if it worked is tojust work make WF/AS suff way path all that stuff make a spawner near it export it try in renegade to see if problem presests

or just try not coping waypaths and suff it myt idont know

You have to make your pathfind generator before you add the waypoints.

is that so? according to the renhelp site it says to do the waypoints first...then add the pathfind generator and generate sectors....lll try doing the waypoints from scratch. I regenerated the sectors and low and behold..... GDI had a traffic jam outside the WF and Nod was working properly :S

Damm that is LOT of harvesters

I thought that if something is inside the main hall when something is created inside the Weapons Factory it gets destroyed.

they drive out of the WF and more spawn behind them...eventually yeah they start destroying some of the previous ones. But more kept coming. Redid the waypoints from scratch - all of them - and Nod is having a traffic jam again...

bump....

Another idea I had was to forget refineries altogether and just put like 3 silos lol...

edit: I have replaced the Refinery with 2 more silos...3 silos @1 cred per sec...only thing now is the good old flame tank bug...
