Hello, I have trouble with RenGuard.

The game seems to freeze when I try to play in multi-player, when the map loads it goes to about 95% and then stops. And there is no text on the pic on the loadingpage. This is the same with the multiplayer tryout in the game, but there it doesn't freeze.

I have Win XP home edition, Intel Pentium 4 2.4Ghz CPU

The patching of RenGuard was completed without problems.

Someone please help

The text on the loading screen isn't supposed to be their.

Uninstall RenGuard and try loading a game, come back and tell us if it still crashes.

Oh and if your talking of the Core update, its not a Renguard update.

sounds like a renegade problem, not renguard. Try using game2.exe and tell me if it still does his.

Tried using the game2.exe. It still freezes when I try multiplayer.

What do you mean by loading a game? Singleplayer? if so, that works perfect, with and without renguard. it's only multiplayer it hangs on.

Yes, it's the core update i mean.

Will try to reinstall renegade and renguard.

---

Uninstalling renguard helps. multiplayer works.

Have reinstalled renegade and renguard. Still the same problem. It hangs at the loadscreen, at about 95%

Oh wow. I reinstalled it all again and now it seems to work!

Thanks!
