Well recently my PC got a few virus and such when i visited a site and something automaticly downloaded into my harddrive.I found it and got rid of it but now when ever i play ren my FPS is around 5-15 before it was around 25-35. I even reinstalled ren and i still got the problem. I was wondering if its my graphics card thats screwed up or my PC just has more virues that i cant find

Probably the latter. Do a virus check with up to date definitions IN SAFE MODE and do a spyware check (for exemple www.spybot.info).

I have done that, I even called my brother who pretty much maintains our PC's. I think theres still one more or so just he proboly didnt tell me
But why does it only do to renegade? I mena the PC doesnt lag, renegade and only renegade does (fps 1-10)

It might help to know what was downloaded.

Are you willing to confess to what site you wre viewing and which browser? (If your using IE your asking for trouble)

If you suggest i went to a porno site or such i didnt.

<blood> i see

<blood> i got all the stuff to register it at freserials.com, but beware, spyware is abound there, so

go in with a full rubber
<[BBF]Dave> ok
<[BBF]Dave> lol

I was looking for a serial for MIRC. Im not sure if the main page dled it or if i clicked on a page. i dont remember
And i use sbc global (idk if thats what u mean)

I did go with "full rubber" or so i thought. What was downloaded was a anti virus program sheriff something. Oh yeah it also disabled my task manager :S but i fixed that.

Well then you've successfully screwed yourself.

I have no time for people who screw up their own PC's trying to pirate.

rofl, owned by spy sheriff, should be good fun to remove.
p.s.
you picked a bad serial site
