Hi, after reinstalling my renegade because of problems with my serial, I'm getting a glitch where none of my text shows up and I can't click on anything. Has anyone had this problem or have a solution for it? I've tried reinstalling it about 7 times, to no avail. I've tried installing CP2 to no avail as well.. Nothing I try seems to work, so could someone please help me with this?

Remove all entries for Renegade in the register. Or try installing in a different directory, that also often does the trick .

Does that not have something to do with the string file being corrupt. Or maybe thats when everything gets displayed as TTbff or something like that.
