Hey i just made a modelled this Personal type helicopter.

It did not take me very long. What do ya think.

That is freakin sweet. The only thing you need to do with it now is make it so that when you get in it, it will show your player in the seat .

It looks like your head would get chopped off if you were too tall.

hehe, cool!

You can just imagine...
"This is your pilot speaking, everybody put your hands up if your aren't gay!"

I'm 6'0. I couldn't go near that thing   Oh well.

Heh. Looks like DaVinci and Sikorsky got together on that one.

Still, it's better than what I could do. I have trouble using frikken Auto-CAD.

Whay do you have two profiles for one forum?

Anyway, Phase game models arent made in auto-cad. For renegade you can use gmax or 3ds max + gmax for the w3d export.

I was joking about the Auto-Cad bit. I was referring to my inability to use any art program whatsoever (though I have used Auto-Cad) due to my lack of artistic ability.

Example:
"Your essay was awesome! I can barely right my own name!"
Names are not written in essay form, duh. But rather the speaker's penmanship sucks. Do you get it? Meh. Sarcasm has changed these days. Oh well.

PS: I got a D in Technical drawing. I guess it helps tp be able to draw. : \

In the mod forum, i usually dont take into consideration sarcasm. But somepeople are clueless and really mean things like that seriously.

WOW. I talked to my math teacher about the first 3-D model on this page. He told me we used to have something like this (I think), during Vietnam. He tried to detail it to me, but I didn't get any sleep the previous night and nodded off during most of the conversation.

Anyways, do any of you know what he was referring to? If it did exist, did it work?

EDIT: What? Surely no one would make that mistake! If this forum truly is devoid of sarcasm, perhaps we should contribute?
