This is a program that works to clean your Renegade directory of unimportant files for example, the client/renlogs logs.

Requirements

.Net Framework 2.0

Options

Delete
1. Client Logs
2. Crash Logs
3. ReadMe's
4. Patch Notes
5. Server Logs (If Any)

How To Use

For the client open the program, press "Change Dir" and select "Renegade.exe". After select which options you would like to clean, and press "Perform Actions". A Message Box will appear once the program has finished cleaning.

For the server, do the above but instead of selecting "Renegade.exe" choose "RenegadeServer.exe".

File Attachments
1) RenegadeCleaner.exe, downloaded 107 times

Does it also delete .thu files...? since thats the only thing that usally makes a load of more space in my data folder. + It tends to give the spawn rifle bug alot more. Also patch notes, and crash logs you only get those once? So if you delete them at the start after installing. Still for the more lazy people I guess this is a nice program.

Currently it doesn't delete thu files. I may look for other ways to increase the disk space be deleting unnesscesarry objects.
