Hello,ive recently just downloaded renguard all well. Before installing my servers used to be all yellow and i never realy lagged much ingame,but now after installing renguard my full list shows red

and now my games totaly lag out,even on a ren server.anyone got any ideas

All those red pings are due to ping packets being blocked at the servers' firewalls (which is a glitch in XWIS), as for the lag, press f8 and type fps then tell us the numbers in the upper right hand corner of your screen while you are in a server.

fps=39(somtimes jumps upto 70ish). i still carnt see why i lag :/never used to before installing ren>\_< i keep jumping back also  
here is a ss of the rest.

also incase its needed my pc stats:-

cpu intel pent 3.4  
ram 2gig  
Video:ATI Radeon X600 256  
HD 300 gig  
my connection to the net is dsl,but im not sure of its speed

Is someone on your router like leeching off of KaZaA or something? That ping is HIDEOUS dude...

I can assure you that RenGuard does not cause lag. The amount of data Renguard sends is a drop in the bucket compared to normal network traffic. And, there is no constant stream of data, so there is no way that it can make all of the xwis servers show as a bad ping for you.

If you don't believe me, run a packet sniffer and analyze just how much data renguard sends...I'm sure you will find it to be less than any of the spyware running on your PC is sending
