I am trying to diagnose if the obelisk glow effect (the red cloud thing) has ever worked when playing as someone other than the host.
Does anyone know if it has ever worked (with bhs.dll on the server/client or without) and if so, what versions of scripts.dll were involved. All I know is that I cant make it work unfortunately and I dont know why

I don't remember which version it was, but I've seen it glow in a public server many times before. I actually thought this was fixed.

What I can tell you is that I had bhs.dll.

yes

scripts = 688KB 3/11/2006
BHS = 180KB 3/11/2006

So you had that scripts.dll/bhs.dll version and connected to a server and got the obelisk glow?

My client version of scripts.dll and bhs.dll:

I think that's 2.6, but it might be 2.5.2

Server: BCServ4 (Black-Cell.net Marathon)

[00:36:21] <~ccfan4326[Laptop]> it's running 2.2.x

Fraps Video: <http://bcserv5.black-cell.net/~pub/havoc9826/obglow.wmv> - 2.1 MB

What I find a bit weird is how the obelisk charge sound is at the location of the target, rather than at the obelisk itself, although I certainly like the advantage it gives. Also, in the second part of my video, I'm not sure why the obelisk's so confused as to whether it should be charging or shooting, but maybe that's Renegade's fault.

I'm sure I've seen it, running pure Renegade, no bhs.dll or scripts.

Sometimes it will charge but not fire.

I think the only time I've seen it work in pure Renegade is in Multiplayer Practice. I may be mistaken though, since I haven't been without client-side scripts in over a year and a half.

I've never played without client side scripts. So it's always worked for me.

I swear it's done server side?

It's always worked fine after using client side scripts.

Even before I downloaded RG, I could see the glow. After that, though, it seemed much better.

It glows but when not using the scripts listen for the sounds then move. Sometimes i forget its charging and move to soon and ZAP!. The sound is key when ob walking on servers that allow it.

Hello ppl im new 2 here....don't hate me yet

Ok, turns out that SSAOW (and Dragonade) contain code to do the obelisk glow. This is why so many people see it on their servers (including me on bcsrv5) but I cant make it work in my tests. The answer is that it doesnt work, SSAOW just includes logic to fake it and make it look like it works.

So, it would appear as though there might be something wrong with my animation fix (or with Set_Animation_Frame). Further testing is needed.

Obelisk glowing (the animation) worked since BHS.dll 1.9 (scripts 1.9), try the scripts.dll stuff in CP1..

I remember testing it - no doubt that it worked. if it doesn't work anymore, it might be broken. No SSAOW was needed to make it work.

If someone can identify which combination of server (non SSAOW) dll and client dll make the obelisk work, that would be great

Well I have the latest client scripts.dll and I have been getting the obelisk glow working properly for a long time, also worked with various older versions of scripts.dll

I always play on TK2 serv, but as far as I know that runs SSAOW (not sure which version)

I have tried several different versions of scripts.dll on both the server and the client (including both the CP1 and the CP2 versions) and no obelisk glow in my tests.
If someone can find a server that is running a stock scripts.dll version AND has working obelisk glow when used with a given stock scripts.dll version on the client, please point me to it (so I can do further tests)
